Modern Masonry: Housing Insights 2015

20 October 2015

IET, Austin Court, Birmingham, B1 2NP

An event organised by British Precast and the Modern Masonry Alliance during which attendees will hear from key industry figures, as they provide insight into the housing market, regulation and performance, as well as encouraging debate on the key considerations in delivering high performance housing.

Attendance is free although registration prior to the event is required.

A font of mortar wisdom

The when, why and how of choosing and using mortar are now well covered on the MIA's website, www.mortar.org.uk as the association's series of data sheets near completion in terms of updates.

The website draws a consistently high number of visitors including a percentage from around the world. Main areas of interest include guidance on which mortars to use for a project, closely followed by requests for technical information.

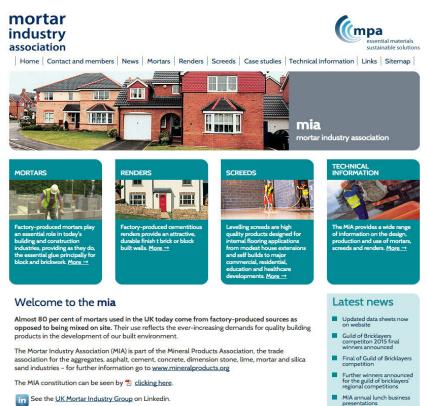

The website now holds amongst its technical information data sheets and learning texts.

All 23 technical data sheets are available to download, both in colour and black and white. Subjects range from types and uses of mortar to technical references and the use of pigments and lime. Learning texts are designed to help a wide range of construction industry personnel from apprentices through to seasoned specifiers and are available to download in 13 parts. Contents ranges from an introduction to mortar, to properties of masonry mortar and from production to quality assurance.

Design of the website is product led with the home page leading immediately to sections covering mortars, renders, screeds and technical information. Association and product news trailers also appear on the home page.

The site also has a comprehensive guide to MIA producer and associate members as well as to the administrative head office.

But the best way to understand and benefit what is available is to look yourself – go to **www.mortar.org.uk**

Trained operator scheme intoduced by CPI Euromix

Trained operator card

As part of a company drive to increase efficiency and improve health and safety on construction sites, CPI EuroMix has launched its Trained operator card scheme to formalise the training process for users of its silo mixing stations.

CPI promotes continuous improvement in health and safety standards and practice. As part of this commitment, CPI has established a training academy where site service engineers complete a standardised and comprehensive training syllabus.

A key element of the training syllabus is dedicated to training users of the equipment on site to ensure that, once trained to 'CPI standard', all on-site users will be competent and confident operating silo equipment. Upon completion of the new scheme, a CPI Trained operator card will be issued to the user to provide an

easy check for sites that on-site personnel have the correct and appropriate training to operate the equipment

'The introduction of CPI Trained operator cards will help to formalise the certification of our training and processes for silo users, explains Stuart Russell, CPI UK commercial manager. 'We have always delivered a comprehensive training programme and this new card system will help to raise awareness that only trained users should be operating and cleaning the machines on site."

Stuart Russell added: 'Training is fully supported by an easy-to-use explanatory manual and a useful quick reference guide that shows how to undertake day-today care of the equipment, as well as how to deal with routine and basic operating issues to minimise downtime on site.'

With initial training provided free of charge and follow up/refresher training available on request, CPI Trained operator cards are valid for two years from the date of issue. To ensure the highest standards are maintained on site, CPI strongly recommends that only holders of a valid and in-date CPI Trained operator card operates silo equipment.

For further information is available at www.euromix.com

Introducing faces behind the MIA

Steven, national commercial

director of CEMEX UK, has

experience covering all

disciplines relating to

building materials,

28 years industry

The Mortar Industry Association (MIA) operates under the overall umbrella of the Mineral Products Association (MPA) out of offices in London. Its members represent the principal suppliers of factoryproduced mortars throughout the UK and its activities are overseen by an executive committee, chaired by Steven Large.

Steve Large

developed both in the UK and internationally. He is also a council member for CONSTRUCT, the trade association for those working in the concrete structures industry

Brian James

include the association's regional activities and the dimensional stone and silica sand operations

MIA director, Brian James, is

based in London. Brian, a

chartered civil engineer,

industry both in the UK

and overseas. He carries

the MPA banner which

other responsibilities under

has extensive construction

New housing completions on the up

Not since the late 1970s has Britain been close to building anything like the 230,00 new homes a year it needs for its growing population but recent published figures at least show a move in the right direction: but there is a long way to go.

The latest National Statistics on house building issued by the Department for Communities and Local Government in August show that in the 12 months

ending June 2015, 131,060 homes were completed. This is 15 per cent higher than the previous year but is 26 per cent below the level for the 12 months ending December 2007

Private enterprise housing completions were 11 per cent higher in the year ending June 2015 than in the year before whilst completions by housing associations rose by 30 per cent over the same period.

It is estimated that almost 80 per cent of mortars used in the UK today come from factory-produced sources as opposed to being mixed on site. MIA members continue to supply materials that reflect the everincreasing demands for quality building products in the development of our built environment.
